

Contributing

Follow these steps to contribute:

1. ****Clone or Pull the Repository:****

- Clone the repository to your local machine.

```
```bash
git clone https://github.com/db-malik/SayIT.git
cd SayIT
```
```

- Or pull the latest changes if you already have a local copy.

```
```bash
git pull origin main
```
```

2. ****Switch to Your Branch name:****

- Create a new branch for your feature or bug fix.

```
```bash
git checkout branch_name
```
```

3. ****Make Changes:****

- Implement your changes, write code, and test thoroughly.

4. ****Commit Changes:****

- Commit your changes with a descriptive commit message.

```
```bash
git add .
git commit -m "Add your descriptive message here"
```

```

5. ****Push Changes:****

- Push your changes.

```
```bash
```

```
git push origin branch
```

```

6. ****Create a Pull Request:****

- Go to the original repository on GitHub.
- You should see a prompt to create a pull request from your recently pushed branch.
- Provide a clear title and description for your pull request.
- Submit the pull request.

7. ****Review and Merge:****

- Project maintainers will review your changes.
- Once approved, your changes will be merged into the main project.

Thank you for your contribution! 🚀
